

MORNING AI TECH UPDATE

AI Briefing for Builders

Codex, Gemini, Claude, open models, and practical free or low-cost access opportunities worth checking today.

DATE

May 28, 2026

WINDOW

Last 24-48 hours

FOCUS

Actionable AI updates

Top Updates

CONFIRMED

OPENAI CODEX

OpenAI's latest Codex updates include Appshots, Goal mode across app, IDE, and CLI, better in-app browser annotations, and locked remote computer use for eligible Mac users. Codex remote access from ChatGPT mobile is rolling out across plans, including Free and Go, in supported regions. Sources: [OpenAI release notes](#), [OpenAI Business notes](#).

CONFIRMED

ANTHROPIC

Anthropic opened a Milan office on May 27 and says partner JAKALA is deploying Claude across 3,000+ seats. This is enterprise expansion, not a new free-access offer. Source: [Anthropic](#).

CONFIRMED

GEMINI

Google's I/O-era Gemini update remains the major current item: Gemini 3.5 Flash, Gemini Omni, Daily Brief, Gemini Spark, and a macOS app path. Spark beta is aimed at U.S. Google AI Ultra subscribers first; macOS app access is broader, with more features expected later. Source: [Google Blog](#).

Free And Low-Cost Access

ACTIONABLE

CODEX

Free and Go users can try Codex remote mobile preview where available. Practical move today: update the ChatGPT mobile app and the Codex macOS app, then check whether remote sessions are enabled on your account.

FREE PLAN

CLAUDE

Claude memory from chat history is available to all users, including free users. Source: [Claude release notes](#).

CHECK LIMITS

GEMINI API

Google AI Studio still has a free tier, but exact model limits and rate limits vary by project. Check your live AI Studio quota dashboard before planning heavy usage. Source: [Gemini API pricing](#).

New Models And Tools

BENCHMARK

AGENTS

Hugging Face published a May 27 agentic enterprise IT benchmark. Claude Opus 4.7 leads at 47%, GPT-5.5 follows at 46%, and open-weight GLM-5.1 scores 40%. Takeaway: even frontier agents are still weak on real SRE and Kubernetes incident diagnosis. Source: [Hugging Face / IBM / Artificial Analysis](#).

LOCAL AI

OPEN STACK

Hugging Face posted a fully local speech-to-speech stack for Reachy Mini using open components like llama.cpp, Gemma 4, Parakeet STT, and Qwen3-TTS. Useful for privacy-focused or no-API-cost experiments. Source: [Hugging Face](#).

Watchlist

NO NEW GIVEAWAY FOUND

No fresh confirmed last-24-hour free frontier-model giveaway from OpenAI, Anthropic, or Google was found this morning.

CAUTION

Treat cheap Claude or OpenAI proxy offers carefully. If it is not from the official provider or a reputable platform, assume possible credential misuse, model substitution, or prompt logging.
